Session 3

Comparative Adjectives

Let's review!

What is a Comparative?

We use comparatives to compare two things.

Let's review!

Comparing **Two** Things

We compare **Thing A** vs. **Thing B**.

Laptop A vs. Laptop B

My Phone vs. Your Phone

Website A vs. Website B

The most important word is:

THAN

Rule 1: Short Adjectives

For short adjectives (1 syllable), we add **-ER + THAN**.

- ⚡ fast faster than
- ⚡ slow slower than
- newer newer than
- ⚡ old older than

Rule 1: Examples

My laptop is **faster than** your laptop.

This Wi-Fi is **slower than** the Wi-Fi at work.

Her phone is **newer than** my phone.

Let's review!

Rule 2: Adjectives ending in -Y

For adjectives ending in **-y**, we change **y** to **-IER** + **THAN**.

→ **easy** **easier than**

→ **heavy** **heavier than**

→ **busy** **busier than**

Photoshop is heavier than Lightroom.

Let's review!

Rule 2: Examples

- ⚡ This app is **easier than** that app.
- ⚡ The old printer is **heavier than** the new one.
- ⚡ The server is **busier than** normal.

Lesson 3: Practice Time

Let's Read! (Exercises 1-5)

Exercise 1

Ex 1: Reading Comprehension – Read the text and answer the questions.

Choosing the Best Laptop for Students

Many students today need a laptop for school, and choosing the right one can be difficult. There are many options, and each laptop has different features. Some laptops are faster and more powerful, while others are lighter and cheaper. Students must decide which option is better for their needs.

For example, a gaming laptop is usually heavier and more expensive, but it is also stronger and more capable of running big programs. A Chromebook, on the other hand, is lighter, simpler, and often more affordable. However, it may be less powerful than other laptops, so it might not run advanced software.

The battery life is another important feature. Some laptops last only four or five hours, while others can last for ten hours or more. A laptop with longer battery life is more convenient for students who study in different places. It is also easier to use during long classes.

Students should also think about storage. A laptop with an SSD is usually faster than one with an HDD, and it can open programs more quickly. However, SSDs are sometimes smaller and more expensive.

In the end, the “best” laptop depends on the student. A programming student might choose a more powerful machine to run code. A design student might want a laptop with a better screen. A writing student may prefer a lighter and cheaper one. The important thing is to compare the options carefully and choose the most suitable device.

Choosing the Best Laptop for Students - Questions

1. Why is choosing a laptop difficult for students?
2. How is a gaming laptop different from a Chromebook?
3. What makes a long battery life convenient?
4. Why might an SSD be better than an HDD?
5. Who might need a more powerful laptop?
6. Why might a student choose a cheaper laptop?
7. What is the most important thing when choosing a laptop?

Exercise 2

Ex 1: Reading Comprehension – Read the text and answer the questions.

Cloud Storage Services Today

Cloud storage has become one of the most popular tools for students and professionals. Instead of saving files on a flash drive, people can save them online and access them from any device. However, not all cloud services are the same. Some are safer, others are cheaper, and some offer better features for teamwork. Google Drive is one of the easiest services to use. It has a simple design, and it is also faster for sharing documents. Many schools use Google Drive because students can work together on the same file in real time. However, it has less free storage than some of its competitors. Dropbox is known for being more secure. Many companies prefer it because it has stronger security systems. It is also more stable, especially when uploading large files. However, its free storage is smaller than Google Drive's, and its paid plans are usually more expensive. OneDrive, from Microsoft, works better with Windows computers. It connects directly to Word, Excel, and PowerPoint, so saving documents is quicker and easier. It is also cheaper for students because many schools include OneDrive accounts in their programs. However, some users say that syncing files is sometimes slower than on other platforms. In general, cloud services are becoming more important than ever. People need fast access to documents, photos, and videos. Although some platforms are stronger, faster, or cheaper, the best choice depends on what the user values most.

Choosing the Best Laptop for Students - Questions

1. Why is cloud storage popular today?
2. What makes Google Drive easy to use?
3. Why do companies prefer Dropbox?
4. What makes OneDrive helpful for Windows users?
5. Which service is more secure?
6. Which service is cheaper for students?
7. Why are cloud services becoming more important?

Exercise 3

Ex 1: Reading Comprehension – Read the text and answer the questions.

Learning to Code Online

Learning to code online is becoming more common every year. Many students want to understand programming because the job market is becoming more digital. Online courses are often cheaper and more flexible than traditional classes. Students can learn at their own pace, and the lessons are usually shorter and easier to follow. Some platforms, such as Codecademy, offer interactive exercises. These exercises are more engaging than simple videos because students can try the code immediately. However, some learners say that video lessons are more comfortable for long explanations. YouTube is another helpful resource. It is more popular than most websites because it is free. Students can find lessons about Python, JavaScript, HTML, and many other languages. However, the quality of lessons can be less consistent, and some videos are less clear than others. Some students prefer paid platforms like Udemy or Coursera because the courses are usually better organized. They include quizzes, projects, and certificates. Even though they are more expensive, many students think they are worth it because the content is more complete. Learning online also requires discipline. It can be easier to become distracted at home. A physical classroom can feel more motivating, especially with classmates. However, online learning is often more convenient, and students with busy schedules can choose the best time to study.

Choosing the Best Laptop for Students - Questions

1. Why is learning to code online becoming more common?
2. What makes online courses more flexible?
3. Why are Codecademy exercises engaging?
4. What is a problem with YouTube lessons?
5. Why do students choose paid platforms?
6. What is a challenge of online learning?
7. Why is online learning convenient?

End of Lesson

Great job! See you next class.
